EDUCATION

JAGRAN LAKECITY UNIVERSITY Bhopal, M.P.
Bachelors of Technology in Computer Science and Engineering (AIML) June 2023 – Present
Cumulative GPA: 8.2 / 10.00

EXPERIENCE

Open Source Contributor – GSSOC'26 Remote
GirlScript Summer of Code May 2026 – Present

- Contributing to open-source software projects through GitHub-based development, issue resolution, documentation, and collaborative workflows.[cite: 2]
- Collaborating with maintainers and contributors to understand requirements, implement changes, troubleshoot issues, and improve project functionality.[cite: 2]
- Applying software engineering practices including version control, debugging, code organization, and code review.[cite: 2]

TECHNICAL SKILLS

Languages: C++, C, HTML, Python, JavaScript, Dart, SQL
Frontend: React.js, Tailwind CSS, REST API Integration
Backend: Flask, FastAPI, Node.js (Basic), RESTful APIs, JWT Authentication
Databases & Infrastructure: MySQL, PostgreSQL, Docker, Schema Design, Query Optimization
AI & Integration: LLM APIs (Ollama, Claude), Prompt Engineering, Whisper Speech-to-Text, FAISS, AI-based Systems
Tools & Frameworks: Git, GitHub, VS Code, npm
Soft Skills: Problem Solving, Analytical Thinking, Communication, Team Collaboration

PROJECTS

JARP: Job Application Readiness Platform (Ongoing) July 2026 – Dec 2026
Python, React.js, Tailwind CSS, FastAPI, PostgreSQL, Whisper, Ollama / Local LLM, Docker, JWT

- Developing an AI-powered platform combining resume tailoring and mock interview preparation to improve job application readiness and ATS compatibility.[cite: 3]
- Building an AI tailoring module that analyzes job descriptions, calculates ATS matching scores, and provides side-by-side diff previews with PDF export options.[cite: 3]
- Implementing a mock interview workflow generating role-specific questions, transcribing audio responses using OpenAI Whisper, and delivering timestamped feedback on speech clarity.[cite: 3]

Explainable Brain Tumor Diagnosis System *Jan 2026 – June 2026*
ResNet50, EfficientNetB0, Grad-CAM, SHAP, Deep Learning, Computer Vision, Explainable AI

- Developed a deep learning classification model using ResNet50 and EfficientNetB0 for MRI-based brain tumor identification across ∼7K images.[cite: 1]
- Integrated Grad-CAM and SHAP visual explanations to provide confidence-based predictions, enhancing transparency and reliability for AI-assisted clinical diagnosis.[cite: 1]

Skin Disease Prediction Model *July 2025 – Dec 2025*
EfficientNetB0, MobileNetV2, Flask, TensorFlow, Computer Vision, Deep Learning

- Developed a deep learning ensemble model using EfficientNetB0 and MobileNetV2 for multi-class skin disease classification on a balanced dataset of ∼12K images.[cite: 1]
- Built and deployed a Flask web application with user authentication, enabling real-time image predictions through an interactive interface.[cite: 1]
- Applied data augmentation and ensemble techniques to improve overall model generalization, accuracy, and end-to-end ML deployment performance.[cite: 1]

CERTIFICATIONS & RESEARCH

- **Research Presentation:** Presented research paper on *Waste to Wealth* at MANIT, Bhopal.[cite: 1]
- **Research Presentation:** Presented research paper on *Plastic Waste Infrastructure* at SIRT, Bhopal.[cite: 1]
- **Cloud Computing Fundamentals** – KodeKloud[cite: 1]
- **Amazon Elastic Compute Cloud (EC2)** – KodeKloud[cite: 1]
